Partner applications Autodesk LifeCAD provides drawing (vector) applications for: Construction Design and Management (CDM), a web-based platform for construction projects. It is integrated with other companies' products for project delivery and construction management; and Flows, a tool for drafting, importing and exporting of 2D and 3D cross-sections and datum geometry from and to applications including AutoCAD, Autodesk Revit, Autodesk Civil 3D, Bentley MicroStation, and ARUP 3D. Infrastructure The infrastructure that supports all of AutoCAD's functionality resides on each computer on which AutoCAD is installed. Because of this, the infrastructure is commonly referred to as "AutoCAD". The AutoCAD desktop application itself, along with the libraries and support tools it relies on are distributed as part of each AutoCAD release. The features (including drawing and editing tools) available in AutoCAD are also distributed as part of each AutoCAD release. The AutoCAD Application Server is a web-based Application Programming Interface (API) that allows developers to create applications or add-ons for AutoCAD. The Enterprise Architecture Services (EAS) component of the AutoCAD Application Server provides access to AutoCAD services and data for clients other than AutoCAD itself. The following diagram illustrates the architecture of Autodesk's AutoCAD platform. Components AutoCAD itself is the core of AutoCAD. The core consists of the AutoCAD Application Server (AutoCAD Application Server is included in the AutoCAD subscription service and AutoCAD IntelliType Autocomplete), AutoCAD's database engine and a set of libraries. The latter allows Autodesk to focus on their core functionality and not on the complexities of creating, debugging, testing, documenting, and maintaining these components. The three components are described in the table below. Libraries A number of Autodesk libraries including the AutoCAD API and the Autodesk Runtime Environment (ARE). AutoCAD Application Server AutoCAD Application Server, is a web-based Application Programming Interface (API) that allows developers to create applications or add-ons for AutoCAD. It is available in AutoCAD as part of the AutoCAD Subscription Service and in AutoCAD IntelliType Autocomplete. AutoCAD a1d647c40b
