The languages available are Java, Visual Basic for Applications, Visual LISP, Autocad LISP, VBA and .NET. Rendering AutoCAD also has the ability to render (or "draw") vector, raster, CADType, or blended drawings. The rendering engine is a separate program known as BSL. It uses an interpreter written in AutoLISP. The primary tool used to render drawings is a right mouse button click, though layers, dynamic linked styles, and dynamically changing features can be used. Other features include the ability to work with a sequence of drawings, complete "viewsets", exporting to RTF format, and also to process external scripts. Features AutoLISP is the programming language used in AutoCAD, added in AutoCAD version 2.x. Dynamic linked styles and blocks are used to integrate colors, drawings, or other information from other AutoCAD files. Dynamic linked styles are built from a LISP code (dyn-style.lsp) and the block code (dyn-block.lsp) (in AutoCAD LT, they are simply called dynamic styles). The most powerful feature in AutoCAD is the ability to link the drawing to a library of formulas. This includes functions, equations, color schemes, and linetypes. Once a link is made, the drawing can be automatically updated as the source data is updated. This feature enables the use of paper-less design, which uses AutoCAD as a graphic user interface (GUI) instead of paper and ink. AutoLISP is also used in Autodesk Catalyst, Autodesk 3D, the Force!, and other products. ArcCatalog is the data management and viewer component of AutoCAD. It supports database storage and management, feature extraction, data capture, and data exchange, the latter through the DXF (Drawing Exchange Format) data exchange format. ArcEditor is the graphing component of AutoCAD. It can graph such things as: CADSurface, CADShape, CADType, B-rep, B-spline, multisegmental, spline, and spline surfaces, linear, circular, and conic. AutoCAD has a number of standard external libraries, or external API's, that are used in third party applications. The most common library is BSL, which is used to interpret the dynamic linked style system. The a1d647c40b
