The CSE department, University of Q: "Cannot resolve reference from backend context" when creating new Project New Workspace Eclipse Luna, Python 3.5, Windows 7 After a recent update, I am unable to create a new Python Project in Eclipse. I get the error shown in the attached images. Some tips would be greatly appreciated. A: The problem appears to be related to workspace 'path' settings. In the first image, the workspace path is c:\Users\[...]\workspace; In the second image, it is c:\Users\[...] ewworkspace, so the references don't resolve. Moving the workspace folder to the correct location fixes the problem. Q: Use self.new() instead of new in a class Is there a reason for a Python developer to always use self.new() instead of new? If it is just that the warning is more prominent, that is still important. A: It is a convention that most Pythonists choose to follow, but it is not enforced. I suggest that if you choose to use self.new in your code, you comment it in

Over the past decade, however, the size of the gate in planar memory cells has been reduced to less than 100 nm, while the thickness of gate oxides has been reduced to less than 12 angstroms, the equivalent of a sheet charge of around 1.times.10.sup.-15 coulombs. This has lead to the widespread introduction of non-planar memory cell structures such as, but not limited to, capacitor-over-bit line (COB) and vertical-capacitor (VCAP) cell structures. These non-planar memory cells take advantage of the thin gate oxides used in semiconductor manufacturing facilities. The introduction of non-planar memory cell structures, however, brings with it the challenge of forming conductive interconnections between select transistor and memory cell structures. Direct observation of progranulin form and function in human osteosarcoma cells. Although the progranulin (PRG) locus has been reported to be a tumor-suppressor gene in neuroblastoma and astrocytoma, the function of PRG in osteosarcoma is unclear. To directly characterize PRG forms, we constructed inducible expression vectors in which the cells expressed human wild type PRG, variant PRG (nPRG1 and mPRG2), or progranulin lacking the glycosylation site (non-glycosylated PRG (nGPRG)), as well as small interfering RNA (siRNA) vectors to downregulate PRG. Using an indirect immunofluorescence assay and confocal laser microscopy, we observed that the non-glycosylated PRG was predominantly localized in the Golgi apparatus, but not
