One of the coolest things in Photoshop is the ability to rotate or mirror images. Rotating an image 180 degrees is easy enough, but by rotating an image by any amount while keeping the image the same size, you can generate a variety of artistic effects. Rotating an image in Photoshop is done by moving the Rotate tool to the edge of the image and then dragging the cursor clockwise (Figure 6-1A) or counterclockwise (Figure 6-1B) while you release the mouse button. **\*\*Figure 6-1A\*\*** : Rotate an image by moving the Rotate tool to the edge of the image and then dragging clockwise. **\*\*Figure 6-1B\*\*** : Rotate an image by moving the Rotate tool to the edge of the image and then dragging counterclockwise. Mirroring an image in Photoshop is a little trickier because Photoshop does not, by default, mirror an image horizontally. If you want to mirror an image horizontally, create a new image, double-click the layer to select it, and then press the Ctrl+T keyboard shortcut to activate the Transform tool. If you want to create a vertical image, create a new layer, double-click the layer to select it, and then press the Ctrl+T keyboard shortcut to activate the Transform tool. **\*\*Figure 6-2\*\*** : Mirror an image horizontally. **\*\*Figure 6-3\*\*** : Mirror an image vertically. After you have the image rotated and mirrored the way you want, simply press the Enter key to accept the changes (Figure 6-4). **\*\*Figure 6-4\*\*** : After you have rotated and mirrored an image, press Enter to accept the changes. # **\*\*Rotating Image Cropping\*\*** A simple way to create unique looks to your images is by cropping an image. [Medical consumption and medical costs in human trafficking]. This paper analyzes the consumption of healthcare services in the context of a labor trafficking case, through the analysis of medical records taken from the patients. Case study, qualitative research, descriptive, transversal, quantitative. The study involved the collection of medical records of patients from the Public Health System (SUS) corresponding to the hospitalization unit for labor trafficking that occurred from January to December of 2011 in a specialized health care center in the capital of the state of São Paulo. The information was obtained from the medical records taken from the patients. The data were organized using Excel software and exported to the statistical software for analysis of the results. It was observed that 96.8% of patients attended the medical care in 11 months, while only 3.2% were interned for more than 11 months. The consulting time ranged from 3 to 12 months, with a mean of 6 months. It was observed that 66.7% of patients were examined in the outpatient clinic and 33.3% in the emergency care unit. The most frequent diagnoses were: hair loss (26.7%), bronchitis (26.7%) and diarrhea (21.7%). The utilization of healthcare services was attributed mainly to the lack of social security, since the poor living conditions of the workers may force them to seek medical attention.

Q: Using C# and MongoDB how can I use child Document IDs for document ID within an array? I've got a pretty simple problem, I've got a database in MongoDB with collections of documents, where within a given document a certain field can be either a zero, one or multiple other documents with the same ID. So for example, the mongo document could look like this: { "\_id": "id1", "name": "Project 1", "type": "person", "childDocuments": [ { "\_id": "id2", "name": "John Doe", "type": "person", }, { "\_id": "id3", "name": "Jane Doe", "type": "person" }, { "\_id": "id4",

Create a Healing Garden Explore the healing aspects of plants and herbs An indoor herb garden can be a calming and beautiful place to spend time. It can also be a relief to use a space that is easy to access. Many of the healing herbs we talk about on this site are highly aromatic so can be difficult to find outside. With a great interior plant you can heal yourself and your family and friends using the freshest, most natural and most potent herbs available. Creating a healing herb garden is one of the simplest and most rewarding projects of all. It can also be highly rewarding to your family, friends and neighbours – particularly if you provide them with the real benefit of a complete, nutritious, natural, ready to eat food... your garden! Creating a Herbal Garden Several factors need to be considered when creating a healing herb garden: The type and placement of containers, how large they are and how far apart they will be. How wide your paths should be. How clean is your area and how well can you remove weeds? Where are your plants likely to get sun and what plants prefer full shade? What potting mixes are going to be suitable for each planting? Does your garden soil need a good amending? Amendments like peat, perlite or compost will increase the number of nutrients in the soil. I recommend that you create a compost or peat-based mix for your herbs and then amend with some more standard organic fertiliser like compost, organic fertiliser and high quality mulch. In this example there are three different types of container, but you can also have two or four. It is also possible to have just one type of container for herbs; this is a hardy plant called basil. This plant can be planted, grown and harvested in containers. Below is a list of plants for your garden and associated uses. You will find each plant detailed on the pages linked to from this list. The goal of this research is to investigate the role of the cytoskeleton in regulating the organization of the endocytic pathway. The proposed studies utilize the yeast *Saccharomyces cerevisiae* as a model system. In the current grant period, we have focused on the v-SNARE protein Sec18p as a regulator of the late steps in the endocytic pathway. Sec18p recruits and activates the  $\gamma$ -COP complex, which promotes the membrane recruitment
