Adobe Photoshop Elements is a free, cross-platform program for users looking for simple tools. While Elements is not nearly as feature-rich as Photoshop, it is available on Windows, Mac, and Linux. Photoshop is big business, and so are its corporate partners, who are getting in on the action. Nikon has entered the Photoshop market with a large suite of tools for working with digital cameras. (They seem to be coming out with a new application at the rate of about every year.) Photoshop and the Internet

In addition to becoming the industry standard for picture editing, Photoshop is also now the standard tool for making Internet graphics. It can be downloaded from the Internet at no cost. Free versions are available that aren't nearly as powerful as the paid versions, but they are still useful and save money, and you can always upgrade to the paid version. Because they are relatively

simple applications, it's easy to use Photoshop and Elements on the Internet. To do so, you need to choose a web hosting service that supports either Macintosh or Windows. In addition, you should choose a file-hosting service that lets you download files to the host computer. These services are much cheaper than a computer and a full-featured web-design program. In addition to web hosting and file-hosting services, another excellent solution for using Photoshop on the Internet is to use what is called a

hosted service. Here, you upload your images to a server that provides the images to other people. Here are a few major providers of hosting and file-hosting services: GoDaddy: [www.godaddy.com](http://www.godaddy.com) Myriad: [www.myriadlabs.com](http://www.myriadlabs.com) Web.com: [www.web.com](http://www.web.com) Woodside Software: [www.woodside.com](http://www.woodside.com) Furthermore, there is also a great collection of hosted services at

[www.whitepages.com/webhosting](http://www.whitepages.com/webhosting). Many web hosting services are much better than others. You should always check out the range of services available to you, including the many free ones. I don't recommend choosing any one service just because it's

free. The quality of the service varies, although many providers offer very good free services. Working with Photoshop Photoshop has a well-organized interface that enables you to manage all the steps in creating and editing images in one place.

You access the interface by clicking on the Photoshop

Hong Kong Chinese University Hong Kong Chinese University is a Chinese university founded in 1983 in Hong Kong. The university is an English language university and operates from the Hung Hom campus of the Chinese University of Hong Kong. Campus The campus covers a total of 237,000 square metres (26.3 hectares) of land, including Bao'an Campus, Hung Hom Campus, Shan-Yen Campus, Queen's Road Campus, and South Island Campus. This area has a total building area of over 3.8 million square metres (38 hectares). Generally, a sealing ring is used to seal a butting face between a ferrule and a cylinder body to retain a sealed fluid, such as mercury, in a fluid accommodation space formed by the ferrule and the cylinder body in a connector through which the fluid is transmitted. FIG. 5 shows a sealing ring disclosed in Japanese Unexamined Patent Publication No. 63-16948. The sealing ring comprises a substantially circular first annular base formed of an elastic material having a relatively large coefficient of thermal expansion such as rubber. The sealing ring further comprises a substantially circular second annular base formed of an elastic material having a relatively small coefficient of thermal expansion such as synthetic resin. The first and second annular bases are joined together in the axial direction at an imaginary part line P. To each side of the first and second annular bases, there is provided a sealing elastic member. The sealing elastic members elastically deform the first and second annular bases in a circumferential direction, thereby assuring fluid-tight sealing of the butting face. The first and second annular bases and the sealing elastic members are formed by an annular molding process. In the conventional sealing ring shown in FIG. 5, however, the first and second annular bases are joined together at the imaginary part line P, so the inner diameter of the sealing ring is set to a relatively large value. The reason why the inner diameter of the

Q: Find a matrices to rotate a plane around a line Given a line in  $\mathbb{R}^3$ , find a rotation matrix  $A \in SO(3)$  such that a plane  $x+y+z=0$  is turned with this rotation around the line. I think I could answer this question just by looking at the equation of the line and visualizing which plane you want rotated around the line. But it seems a little ugly. I was thinking about using the method in this related question to solve the problem. EDIT: I cannot assume any prior knowledge. A: As you have already noticed, you can use any normal vector as a rotation axis of the required rotation. The rotation matrix is given by 
$$A = \begin{bmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & \cos \phi \end{bmatrix} \begin{bmatrix} \cos \theta_z & 0 & \sin \theta_z \\ 0 & \cos \theta_y & \sin \theta_y \\ \sin \theta_z & 0 & -\cos \theta_z \end{bmatrix} \begin{bmatrix} \cos \phi & 0 & -\sin \phi \\ 0 & \cos \theta_x & -\sin \theta_x \\ \sin \phi & 0 & \cos \phi \end{bmatrix} = \begin{bmatrix} \cos \theta_x & \sin \theta_x \cos \phi & -\sin \theta_x \sin \phi \\ \sin \theta_x \cos \phi & \cos \theta_x & \sin \theta_x \sin \phi \\ -\sin \theta_x \sin \phi & \sin \theta_x \sin \phi & \cos \theta_x \end{bmatrix} \begin{bmatrix} \cos \theta_z & \sin \theta_z \\ \sin \theta_z & -\cos \theta_z \end{bmatrix} \begin{bmatrix} \cos \theta_y & \sin \theta_y \\ -\sin \theta_y & \cos \theta_y \end{bmatrix}$$
 The rotation angle  $\phi$  can be expressed in terms of the signed distance of a point
