What's New in the Foo Xspf?

foobar2000-files has been around since ever - and supports more and more formats and file types. However, the developers always try to look for cool features and usability improvements. With xspf we are supporting a new standard called "X-File Specification Format". XSPF-files are basically ZIP-archives encoded into their own format - which includes support for Mp3 and Mp4 containers. XSPF-files provide some great advantages for your OSD-functionality and music-management. With XSPF-files you can see all the metadata you might want to include in your OSD presentation. You can store all tags in the same archive, use different tags for your presentation and handle them without missing information. Great advantages if you want to manage your media files somewhere else than in foobar2000. You can use foobar2000 to read the files - but don't have to. You can read, preview and listen to your XSPF-files without foobar2000 - and with other playback-devices. Install notes: 1. copy xspf files and the foo_xspf.dll and libfoobar2000-xspf.a to your "Program-files"-folder 2. if you add the association "foo - xspf - archive" - then add the file to foobar2000 - the xspf files will then be listed in the playlist's "Show-dialog". You can download the latest version of XSPF here: foobar2000, the popular audio player for Windows (with excellent support for MP3-filetypes), is the standard music manager and audio player of choice for many. It can play a huge range of music files from various music formats and often comes with a wide range of add-ons - and this article is just one of them. What is XSPF? XSPF stands for "Extensible Self Parsing File". If you look into the XSPF standard, you'll find a couple of definitions that are relevant for foobar2000. The standard defines a file format (with XML-like tags) and a playback-file type that fulfills this format. The XSPF-standard has some features that the vast majority of audio files already support. For example if you export your music files from foobar2000 into the XSP
