## Zapco DC Reference Amplifier Connection Program Setup |LINK| Free

So I just bought my first iRig. Trouble is, I can't find a manual for it, nor can I find all the necessary cables. I am going to find out (in a few minutes) if the connection on the inner circuit board is correct. If I was going to buy this, I'd also be concerned about longevity in regards to the amps and the board. Is the amp's circuit board going to fail after a few years, or will this be a non-problem? Also: Do I need any specific cables for the analog inputs? Or are these all included in the \$300 price-tag? Need help and advice on my first digital iRig. I am new to this interface and have a couple questions for you guys. First off, when I have my iPhone 4s charged to about 100% and plug in the iRig does it sound like the volume is missing or is it "flat"? Secondly is there anyway I can get the iRig to sync or play songs from my iPhone 4s to the iRig without an external hub like the Fronaboy or Interbeat? Thanks for your help guys! Click to expand... Welcome! There are several good video tutorials for this interface on YouTube. Be sure to use the search function and look for "iRig". There are two things that can cause "flatness" in the sound. 1. Air (or lack of air) in the headphone/speaker cable. Use plenty of pliers and a screwdriver to tighten the cable connector until the air is eliminated. 2. Trapped dirt inside the connector. Nothing can displace dirt as well as a pair of pliers. 1. You are correct, the interface does not have an external hub, but there are several options you can use to get your music from the iPhone to the interface. The simplest solution is to use a Bluetooth or Wi-Fi link between the iPhone and the interface. You can buy a USB-BT dongle for under \$30, or go wireless using a MiFi. (These are USB dongles with Bluetooth capability that you can plug into your computer and/or a USB port). It is also possible to use an RJ-45 LAN cable to connect the iPhone directly to the interface. There are many different USB-LAN adapters that you can get from Amazon
