Solucionariodeprincipiosdeelectronicaalvinosextaediciongtratis
Solucionariodeprincipiosdeelectronicaalvinosextaediciongtratis. Is there any way to parse this string and get the html code for the website? I want to check if it is runing html5 or not. I am unable to parse this string using DOM parser and regex A: I know this is an old question and you already have an answer, but I'm wondering if there's a more elegant solution than: \$html = file_get_contents(""); \$dom = new DOMDocument(); \$dom->loadHTML(\$html); if (\$dom->getElementsByTagName('head')->item(0)->hasAttribute('type')) { return false; } return true; The present invention relates to a method for the preparation of isocyanates and the 1-hydroxy-1-ene-acetates so produced. Glycidyl isocyanurate, the useful compound prepared from diacetone-D-glucose and phosgene, is the most common polyisocyanate used for the production of polyurethanes. A well known method for the preparation of glycidyl isocyanurate involves the reaction of diacetone-D-glucose with phosgene in an organic solvent to produce the corresponding isocyanate. The isocyanate is then converted to the isocyanate functional terminator, which consists of a mixture of oxime and amino ketones. More particularly, the isocyanate, dissolved in a monobasic aromatic amine, can be reacted with an oxime to form the oxime terminator. The oxime terminator is usually made by reacting excess glycerol monoisocyanate with a mixture of diketene acetamide and methyl ethyl ketone in an organic solvent such as acetone. The oxime terminator is then isolated from the reaction mixture and the solvent is removed to provide the oxime terminator, free of residual isocyanate. However, the oxime terminator so produced is very
